
Will I be required to give the public access to land in the WHIP program?

No. Landowners can prevent trespass and control access by the general public. The landowner must allow NRCS access to the area to monitor the effectiveness of the practices during the agreement period.

How do I apply?

Applications may be submitted, on a continual basis, to any NRCS field office located at local USDA Service Centers. A wildlife plan is prepared and ranked according to ecological, economic and social benefits. The highest ranked applications will be funded first. Contact your local office concerning application deadlines.

What is the Wildlife Habitat Incentives Program?

WHIP is a voluntary conservation program that provides technical and financial assistance to land-owners for developing, improving or managing wildlife habitat or for restoring natural ecosystems on eligible land.

Who is eligible to participate?

Lands eligible for WHIP include private agricultural land and non-industrial private forest land.

Eligible participants will be the owners of these lands.

Land already enrolled in the Conservation Reserve Program, Wetlands Reserve Program, or Emergency Watershed Protection Program floodplain easement component is not eligible for WHIP.

Vermont's native brook trout

If I do not currently participate in other NRCS programs, can I participate in WHIP?

You are welcome to participate in the program. If you enroll in the program, you will need to meet certain conservation compliance and wetland conservation requirements.

Examples of habitats & wildlife targeted by NRCS

- ◆ Grasslands for bobolinks, eastern meadowlark, upland sandpipers, butterflies, green snakes, etc.
- ◆ Old fields, shrub land and young forest habitats for golden-winged warblers, woodcock, grouse, bobcat, black bear, rat snakes, etc.
- ◆ Aquatic habitats for brook trout, native mussels salamanders, mayflies, etc.
- ◆ Riparian and wetland habitats for wood turtles, mink, waterfowl, otters, bats, dragonflies, etc.
- ◆ Rare natural communities such as clayplain forests that support species of concern

Examples of conservation practices that may be eligible for cost share

- Early successional management — grasslands, old fields, shrub land, young forest
- Mast tree and apple tree release

-
- Riparian forest buffers
 - Pest management—invasive plants
 - Fencing to protect sensitive areas

Invasive plant management

Invasive plants are addressed in the context of developing, improving or managing habitat.

How does cost-share assistance work?

NRCS and the participant enter into a cost share agreement that lasts from five to 10 years in length. Under the agreement:

- ◆ The participant agrees to maintain the cost shared practice and allow NRCS or its agent access to monitor practice implementation
- ◆ NRCS agrees to provide technical assistance and share in the cost of implementing the conservation measures
